

WHAT IS CLAIMED IS

1. A photosensitive resin laminate comprising at least a support, an adhesive layer and a photosensitive resin layer, wherein the photosensitive resin laminate shows a total light transmission of not less than 60%.

2. The photosensitive resin laminate of claim 1, wherein the photosensitive resin layer has a thickness of not less than 500  $\mu\text{m}$ , and a Shore hardness of not less than 50°.

3. The photosensitive resin laminate of claim 1, wherein the photosensitive resin layer has an absorbance at 400 nm - 600 nm of not more than 0.3.

4. The photosensitive resin laminate of claim 1, wherein the photosensitive resin layer has a scattering rate of not more than 25%.

5. The photosensitive resin laminate of claim 1, wherein the photosensitive resin layer has a turbidity of not more than 3.5.

6. The photosensitive resin laminate of claim 1, wherein the photosensitive resin layer contains a hydroxylamine derivative.

7. A plate for a signboard comprising the photosensitive resin laminate of claim 1.

8. A signboard having a relief, which comprises the photosensitive resin laminate of claim 1, wherein the photosensitive resin layer has a thickness of not less than 500  $\mu\text{m}$  and is formed at least on the support via the adhesive layer, and a coating layer having an ultraviolet transmission

at 400 nm of not more than 50% on its surface.

9. A signboard having a relief, which comprises the photosensitive resin laminate of claim 1, and a layer having  
5 an image laminated on a side of the support.

10. The signboard of claim 9, wherein the layer having the image is directly printed on the back of the support.

10 11. A photosensitive resin laminate comprising at least a support, an adhesive layer and a photosensitive resin layer, which laminate satisfying the following formula (1):

$$\{(A-B)/A\} \times 100 \leq 15 \quad (1)$$

wherein A is a total light transmission (%) of the support and  
15 B is a total light transmission (%) of the photosensitive resin laminate.

12. The photosensitive resin laminate of claim 11, wherein the photosensitive resin layer has a thickness of not less  
20 than 500  $\mu\text{m}$ , and a Shore hardness of not less than 50°.

13. The photosensitive resin laminate of claim 11, wherein the photosensitive resin layer has an absorbance at 400 nm -  
600 nm of not more than 0.3.

25 14. The photosensitive resin laminate of claim 11, wherein the photosensitive resin layer has a scattering rate of not more than 25%.

30 15. The photosensitive resin laminate of claim 11, wherein the photosensitive resin layer has a turbidity of not more than 3.5.

16. The photosensitive resin laminate of claim 11, wherein

the photosensitive resin layer contains a hydroxylamine derivative.

17. A plate for a signboard comprising the photosensitive  
5 resin laminate of claim 11.

18. A signboard having a relief, which comprises the  
photosensitive resin laminate of claim 11, wherein the  
photosensitive resin layer has a thickness of not less than  
10 500  $\mu\text{m}$  and is formed at least on the support via the adhesive  
layer, and a coating layer having an ultraviolet transmission  
at 400 nm of not more than 50% on its surface.

19. A signboard having a relief, which comprises the  
15 photosensitive resin laminate of claim 11, and a layer having  
an image laminated on a side of the support.

20. The signboard of claim 19, wherein the layer having the  
image is directly printed on the back of the support.
